Applications

- Field termination of tight-buffered or loose tube cables when patch panels are not used
- To manufacture field or factory multifiber jumpers or patch cords

Description

Corning Cable Systems' Spider Fan-Out Kit is a low-cost termination option for multifiber cables. These kits are designed for both factory and field termination of tight-buffered and loose tube non-armored cables with four to 24 fibers. These kits provide the end-user with a craft-friendly, modular product that enables simple step-by-step assembly for successful installation. Installation of the kits eliminates the need for patch panels at low-cost termination points.

The Spider Fan-Out Kit terminates and provides pull-out protection for bare fibers (900 μm or 250 μm). Installation of the product is simple. The cable jacket is stripped back and the fibers are threaded into the modular 6-fiber fan-out inserts. These inserts consist of six 1-meter lengths of fan-out tubing secured in a composite assembly. The fan-out tubing provides three layers of protection consisting of a Teflon inner tube (into which the fiber is inserted), an aramid yarn strength member and an outer protective PVC jacket. The fan-out insert then snaps into the main spider body. When all the inserts have been loaded, the outer housing is installed to complete the assembly.

Features / Benefits

- Low cost
- Craft-friendly
- Modular, compact design
- No special tools or heat shrinks
- Field or factory termination
- Cost effective for splicing and terminating hardware
- Non-metallic/high strength, rugged, composite material
